

China Logistics Prosperity Index

February 2019

China Federation of Logistics & Purchasing 中國物流與採購聯合會

China Federation of Logistics & Purchasing (CFLP) is the logistics and purchasing industry association approved by the State Council. CFLP's mission is to push forward the development of the logistics industry and the procurement businesses of both government and enterprises, as well as the circulation of factors of production in China. The government authorizes the CFLP to produce industry statistics and set industry standards. CFLP is also China's representative in the Asian-Pacific Logistics Federation (APLF) and the International Federation of Purchasing and Supply Management (IFPSM).

The China Logistics Prosperity Index 中國物流業景氣指數

The China Logistics Prosperity Index (LPI), first launched in March 2013, provides an early indication each month of logistics activities in the Chinese logistics sector. The LPI is useful as a fore-indicator of economic and business conditions in China. It is published by China Federation of Logistics & Purchasing (CFLP). The Fung Business Intelligence Centre is responsible for drafting and disseminating the English LPI report.

The business volume index of China Logistics Prosperity Index (LPI) came in at 53.7 in January, down from 54.7 in December.¹

1. Growth deceleration in logistics activities

The business volume index dropped by 1.0 pt from the previous month to 53.7 in January, indicating a deceleration in the growth of logistics activities in the month. This was due partly to the approach of the Chinese New Year Holidays. Meanwhile, the new orders index went down from 55.0 in December to 54.1 in January, showing that the growth of new orders for logistics services has also fallen recently.

The employment index dropped by 2.9 pts from the previous month to 48.4 in January. The index fell below the critical 50-mark in January, indicating a decrease in employment in the logistics sector in the month. In the meantime, the capacity utilization index remained above the critical 50-mark, registering 53.4 in January. Logistics enterprises have seen enhanced utilization of their facilities lately.

2. Drop in inventories in warehouses

The inventory turnover index was 54.9 in January, above 50, pointing to a faster inventory turnover. Meanwhile, the average inventory index was 49.5 in January, below the critical 50-mark, indicating a drop in inventories in warehouses in the month.

3. Faster turnover of cash

The cash flow index came in at 54.7 in January, above 50. The latest reading indicates a faster turnover of cash for the logistics enterprises surveyed.

4. Logistics enterprises are slightly optimistic about business outlook

The business expectations index was 51.8 in January, above 50, showing that logistics enterprises have been slightly optimistic about the business outlook for the next three months.

¹ From May 2014 onwards, the 'composite index' of the LPI is no longer used as an indicator for the overall performance of the logistics sector. Instead, the business volume index is now used as the overall indicator. The business volume index indicates the direction and rate of change in business volume of the logistics sector.

About China Logistics Prosperity Index, LPI:

China Logistics Prosperity Index (LPI) provides an early indication each month of logistics activities in the Chinese logistics sector. The LPI is useful as a fore-indicator of economic and business conditions in China. It is published by China Federation of Logistics & Purchasing (CFLP). The Fung Business Intelligence is responsible for drafting and disseminating the English LPI report. The first LPI was launched in March 2013.

Every month questionnaires are sent to logistics enterprises all over China. The data presented herein is compiled from the enterprises' responses about their logistics activities and inventory situations. No data of individual enterprises should be disclosed. The LPI should be compared to other economic data sources when used in decision-making.

The sampling of the enterprises involves the use of Probability Proportional to Size Sampling (PPS), which means the selection of enterprises surveyed is largely based on each sub-sector's contribution to the operating revenue of the logistics sector, and the representation of each geographical region.

There are 12 sub-indicators in the survey: Business Volume, New Orders, Average Inventory, Inventory Turnover, Cash Flow, Capacity Utilization, Logistics Service Charges, Operating Profit, Operating Cost, Investment in Fixed Asset, Employment and Business Expectations. An index reading above 50 indicates an overall positive change in a sub-indicator; below 50, an overall negative change.

About the Organisations:

China Federation of Logistics & Purchasing

China Federation of Logistics & Purchasing (CFLP) is the logistics and purchasing industry association approved by the State Council. CFLP's mission is to push forward the development of the logistics industry and the procurement businesses of both government and enterprises, as well as the circulation of factors of production in China. The government authorizes the CFLP to produce industry statistics and set industry standards. CFLP is also China's representative in the Asian-Pacific Logistics Federation (APLF) and the International Federation of Purchasing and Supply Management (IFPSM).

Fung Business Intelligence

Fung Business Intelligence collects, analyses and interprets market data on global sourcing, supply chains, distribution, retail and technology.

Headquartered in Hong Kong, it leverages unique relationships and information networks to track and report on these issues with a particular focus on business trends and developments in China and other Asian countries. Fung Business Intelligence makes its data, impartial analysis and specialist knowledge available to businesses, scholars and governments around the world through regular research reports and business publications.

As the knowledge bank and think tank for the Fung Group, a Hong Kong-based multinational corporation, Fung Business Intelligence also provides expertise, advice and consultancy services to the Group and its business partners on issues related to doing business in China, ranging from market entry and company structure, to tax, licensing and other regulatory matters.

Fung Business Intelligence was established in the year 2000.

The Fung Group

The Fung Group is a privately held multinational group of companies headquartered in Hong Kong whose core businesses are trading, logistics, distribution and retailing. The Fung Group employs over 42,150 people across 40 economies worldwide, generating total revenue of over US\$22.66 billion in 2017.
