

China Logistics Prosperity Index

July 2016

China Federation of Logistics & Purchasing 中國物流與採購聯合會

China Federation of Logistics & Purchasing (CFLP) is the logistics and purchasing industry association approved by the State Council. CFLP's mission is to push forward the development of the logistics industry and the procurement businesses of both government and enterprises, as well as the circulation of factors of production in China. The government authorizes the CFLP to produce industry statistics and set industry standards. CFLP is also China's representative in the Asian-Pacific Logistics Federation (APLF) and the International Federation of Purchasing and Supply Management (IFPSM).

The China Logistics Prosperity Index 中國物流業景氣指數

The China Logistics Prosperity Index (LPI), first launched in March 2013, provides an early indication each month of logistics activities in the Chinese logistics sector. The LPI is useful as a fore-indicator of economic and business conditions in China. It is published by China Federation of Logistics & Purchasing (CFLP). The Fung Business Intelligence Centre is responsible for drafting and disseminating the English LPI report.

The business volume index of China Logistics Prosperity Index (LPI) came in at 55.5 in June, up from 54.2 in May.¹ Except the employment index, all sub-indices were in the expansionary zone in June.

1. New orders for logistics services increase at a faster pace

The business volume index rose from 54.2 in May to 55.5 in June, showing a faster growth of logistics activities. Meanwhile, the new orders index went up from 55.0 in May to 56.8 in June, indicating that new orders for logistics services have increased at a faster pace.

The employment index dropped below the critical 50-mark, registering 49.1 in June. The latest reading shows a drop in employment in the logistics industry. The capacity utilization index rose sharply by 3.7 pts from the previous month to 57.0 in June. Logistics enterprises have seen enhanced utilization of their facilities.

2. Higher inventory levels in warehouses

The inventory turnover index came in at 52.1 in June, the same as in May. The June reading was above the critical 50-mark, pointing to faster inventory turnover. Meanwhile, the average inventory index went up from 50.7 in May to 53.3 in June, indicating higher inventory levels in warehouses in the month.

3. Faster turnover of cash

The cash flow index stayed above 50, registering 50.7 in June. The June reading indicates faster turnover of cash for the logistics enterprises surveyed.

4. Logistics service charges stay stable

The operating cost index dropped from 57.0 in May to 54.2 in June, indicating that costs on logistics enterprises have increased at a slower pace. Meanwhile, the logistics service charges index edged up from 49.8 in May to the neutral level of 50.0 in June, indicating that logistics service charges stayed stable in June.

The operating profit index went up from 51.1 in May to 52.2 in June, indicating an acceleration in the growth in profits made by logistics enterprises in June.

5. Logistics enterprises are quite optimistic about business outlook

The fixed asset investment index went up to 56.5 in June from 54.7 in May, indicating that growth in fixed asset investment by logistics enterprises accelerated in June. Meanwhile, the business expectations index came in at 60.9 in June, well above the critical 50-mark. Enterprises in the logistics industry are quite optimistic about the business outlook for the next three months.

¹ From May 2014 onwards, the 'composite index' of the LPI is no longer used as an indicator for the overall performance of the logistics sector. Instead, the business volume index is now used as the overall indicator. The business volume index indicates the direction and rate of change in business volume of the logistics sector.

About China Logistics Prosperity Index, LPI:

China Logistics Prosperity Index (LPI) provides an early indication each month of logistics activities in the Chinese logistics sector. The LPI is useful as a fore-indicator of economic and business conditions in China. It is published by China Federation of Logistics & Purchasing (CFLP). The Fung Business Intelligence is responsible for drafting and disseminating the English LPI report. The first LPI was launched in March 2013.

Every month questionnaires are sent to over 300 logistics enterprises all over China. The data presented herein is compiled from the enterprises' responses about their logistics activities and inventory situations. No data of individual enterprises should be disclosed. The LPI should be compared to other economic data sources when used in decision-making.

Over 300 logistics enterprises in China are surveyed. The sampling of the enterprises involves the use of Probability Proportional to Size Sampling (PPS), which means the selection of enterprises surveyed is largely based on each sub-sector's contribution to the operating revenue of the logistics sector, and the representation of each geographical region.

There are 12 sub-indicators in the survey: Business Volume, New Orders, Average Inventory, Inventory Turnover, Cash Flow, Capacity Utilization, Logistics Service Charges, Operating Profit, Operating Cost, Investment in Fixed Asset, Employment and Business Expectations. An index reading above 50 indicates an overall positive change in a sub-indicator; below 50, an overall negative change.

About the Organisations:

China Federation of Logistics & Purchasing

China Federation of Logistics & Purchasing (CFLP) is the logistics and purchasing industry association approved by the State Council. CFLP's mission is to push forward the development of the logistics industry and the procurement businesses of both government and enterprises, as well as the circulation of factors of production in China.
